Special Processing Considerations

Truncated Items:

Where items are truncated, grant image should display value as submitted through grants.gov, unless otherwise indicated. (Minimum Validations)

Trimming Spaces:

For all validations where a comparison is being made on text entry (or dropdown) fields against the eRA database, trim spaces at the end before making the comparison. (Minimum Validations)

Special Characters:

Validation error to fire if application .xml document cannot be persisted to the database because of special characters. (Minimum Validations)

If an application has special characters, the following error should be returned: "The Application submitted contains special characters not supported by NIH. To avoid this issue, do not cut/paste from word processing documents into form fields. Please directly type the information in the form for the following field(s) and submit the application again: <-Filed name and text to be inserted for each occurrence of special characters.'

CQ 71517

Rule 0.1.6 - DUNS numbers:

Validation to apply to all forms containing a DUNS number present in the package downloaded. If DUNS provided on any forms has any invalid characters (meaning other than 9 or 13 digits) after stripping of dashes, provide error: 'The DUNS number for <insert form name > contains invalid characters (DUNS should be 9 or 13 digits; no letters or special characters).'

Validations at Schema Level

The implementation of some validation requirements may be done at the schema level rather than at the application validation level. The validation requirement does not change; however, in some cases, the error message may be different. The error messages in this table apply only in those cases where the validation is done at the application validation level. (Minimum Validations)

Attachment Validations

A validation needs to be done on all attachments (including appendices) to make sure they are in .pdf format.

Rule 0.1.2

If an attachment is not in .pdf format, the following error should be returned: "The <attachment> attachment is not in PDF format, or the filename is invalid. All attachments must be provided to the agency in PDF format, filenames must be included with no special characters (including brackets), and a .pdf extension must be used. Filenames will be accepted if they include spaces, hyphens, or underlines." (Minimum Validations)

Rule 0.1.1

If an attachment is empty (0 bytes), the following error should be returned: "The <attachment> attachment was empty. PDF attachments cannot be empty attachments. Please submit a changed/corrected application with the correct PDF attachment." (Minimum Validations)

Rule 0.1.5

If editable PDFs are included, the Exchange software should 'flatten' the PDF so that it can be processed. If Exchange Services detects that the flattening process did not work, the following error should be returned: "The <attachment> attachment contained formatting or features not currently supported by NIH. Help with PDF attachments can be found at http://grants.nih.gov/grants/ElectronicReceipt/pdf_guidelines.htm . (Minimum Validations)

Rule 0.1.3:

If a PDF with editable fields has been included, the following error should be returned: "The <attachment> attachment has editable fields. PDF attachments must not include editable fields. Help with PDF attachments can be found at http://grants.nih.gov/grants/ElectronicReceipt/pdf_guidelines.htm. (Minimum Validations)

Rule 0.1.4:

If a PDF with password protection has been included, the following error should be returned: "The <attachment> attachment has password protection. PDF attachments must not include password protection. Help with PDF attachments can be found at http://grants.nih.gov/grants/ElectronicReceipt/pdf_guidelines.htm. (Minimum Validations)

No specific rule

If there is a processing error on an attachment (other than errors listed here), the following error should be returned: "There was a processing error on page <page number> of the <attachment> attachment. This prevented successful processing of the application. Please contact the eRA Help Desk for assistance." (Minimum Validations)

No specific rule

For attachments, the software should detect the page width and height. If the page size is greater than 11 x 11 inches or less than 8.5 x 8.5 inches, the software should change the page size from the actual size to 8.5 x 11 inches. (Minimum Validations)

Limited Validations and Opting Out

For some mechanisms, there are a set of limited validations that will apply to all PAs and PASs, and to any PARs and RFAs that don't 'opt out'. Limited validations have been indicated where applicable below by 'LV'.

The 'opt out' indicator will need to be added for each announcement stored in the database, defaulting to 'opt in'. For now, data will be updated manually to set the indicator for specific records to 'opt out'; eventually, this will become part of the Receipt and Referral RFA/PA Maintenance screen.

If an announcement is 'opt out', *none* of the limited validations for the corresponding mechanism will be performed for applications submitted in response to that announcement. However, PARs and RFAs that opt out of the limited validations will get a generic warning message if they exceed the threshold for the corresponding validation. In each case, the specific generic message is included in the table below.

PARs and RFAs that opt out of the limited validations are still subject to the validations that have not been identified as limited validations.

Identifying a Combined Mechanism

A Combined Mechanism identifier needs to be added to the information for each announcement stored in the database. This will be used to identify any allowable pairs of mechanisms for an announcement. The identifier can be used in conjunction with the activity code to indicate which combined mechanism is being represented. For now, the only allowable pair that will be identified with the identifier is R21/R33; an activity code of R21 plus this indicator will indicate a combined R21/R33.

Identifying Small Business Type

An indicator for whether an announcement is an SBIR or an STTR needs to be added to the information for each small business announcement stored in the database.

Minimum Validations For Specific Mechanisms

Other Agency mechanisms that have not transitioned for NIH will be subject to a set of minimum validations, identified as 'Minimum Validations' in the validations listed below and in the processing sections above. This set of minimum validations may also apply to NIH mechanisms for which applications are being submitted through Grants.Gov but that have not gone through a full transition. The affected mechanisms are to be found in a property file.

Identifying Types of Career Awards

Career Awards (Ks) fall into three main groups: mentored, independent, and training. An indicator needs to be added to the information stored for each activity code to identify which type of Career Award is represented by the activity.

Form Version

Form version numbering has been added to identify elements or validations introduced, updated, or removed depending on the version of the form.

Application Template

Application Template has been added to identify elements or validations introduced, updated, or removed depending on the version of the template.
