BASIC AND CLINICAL STUDIES OF CYSTIC FIBROSIS
NIAMDD, NHLBI, NIAID, NIGMS, NICHD, NIDR
Interested in expanding their basic and clinical research programs. Page 1

NATIONAL INSTITUTE OF NEUROLOGICAL AND COMMUNICATIVE DISORDERS AND STROKE
NATIONAL RESEARCH SERVICE AWARDS FOR INSTITUTIONAL GRANTS
CENTRAL NERVOUS SYSTEM REGENERATION AND PLASTICITY
Encouraging submission of applications. Page 7

CLINICAL RESEARCH TRAINING IN CEREBROVASCULAR DISORDERS, HEAD AND SPINAL CORD INJURY, OR COMA
Encouraging submission of applications. Page 8

HAVE YOU MOVED?
If your present address differs from that shown on the address label, please send your new address to:
Grants and Contract Guide Distribution Center,
Division of Research Grants, D/B, Room 219, Westwood Building, Bethesda, Maryland 20014, and attach your address label to your letter. Prompt notice of your change of address will prevent your name from being removed from our mailing list.

The GUIDE is published at irregular intervals to provide policy and administrative information to individuals and organizations who need to be kept informed of requirements and changes in grants and contracts activities administered by the National Institutes of Health.
Supplements, printed on yellow paper, are published by the respective awarding units concerning new projects, solicitations of sources, and requests for proposals.
NINCDS STROKE AND TRAUMA PROGRAM
NATIONAL RESEARCH SERVICE AWARDS FOR INSTITUTIONAL GRANTS
CENTRAL NERVOUS SYSTEM REGENERATION AND PLASTICITY

The Stroke and Trauma Program of the National Institute of Neurological and Communicative Disorders and Stroke is encouraging the submission of applications for institutional grants for research training in the fields of central nervous system regeneration and/or plasticity in response to injury. Postdoctoral training is being encouraged to help meet the needs of NINCDS-supported programs in these research areas. Examples of appropriate areas of research training are: axoplasmic flow, nerve growth factor, neurotropism, collateral sprouting, synaptogenesis, neuroplasticity in response to injury, and others.

Applicant institutions must have an active program in CNS regeneration and/or plasticity research, under the leadership of scientists qualified and willing to offer and direct postdoctoral research training. Funds are available for trainee stipends and for support of institutional training resources. Trainees may be supported for one to three years. Stipend levels will be dependent upon the trainee's number of years of postdoctoral training and experience. A maximum of three new trainees may be appointed each year.

Applications should be submitted in accordance with the standard NIH forms, procedures, and schedules. Each application will be reviewed on its scientific merit in competition for available funds. Specific information is provided in the NIH Guide for Grants and Contracts, Vol. 6, No. 20, November 14, 1977, pp. 1-5 plus attachments.

Inquiries about the scientific or programmatic aspects of the training program should be directed to the Stroke and Trauma Program, National Institute of Neurological and Communicative Disorders and Stroke, Room 8A13, Federal Building, 7550 Wisconsin Avenue, Bethesda, Maryland 20014, telephone (301) 496-4226. Inquiries regarding application procedure and requests for application forms should be directed to the Assistant Director for Manpower Programs, EAP, NINCDS, Room 1020A, Federal Building, 7550 Wisconsin Avenue, Bethesda, Maryland 20014, telephone (301) 496-9236.
The Stroke and Trauma Program of the National Institute of Neurological and Communicative Disorders and Stroke is encouraging the submission of applications for institutional grants for training in the clinical research fields of the cerebrovascular disorders, head and spinal cord injury, and/or coma. Clinical research training is being encouraged to help meet the needs of NINCDS-supported programs in these research areas, and to increase the opportunities for participation in stroke and trauma clinical research by clinically qualified persons.

Applicant institutions must have an active clinical research program in one or more of the named fields under the leadership of scientists qualified and willing to offer and direct appropriate clinical research training. Funds are available for trainee stipends and for support of institutional training resources. Trainees may be supported for one or two years of research training. Each trainee must have completed at least two years of clinical training in a relevant clinical field (e.g. neurology, neurosurgery, neuropathology, neuroradiology) before being eligible for stipend support. The level of stipend support is dependent upon the trainee's number of years of postdoctoral training and experience. A maximum of three new trainees may be appointed each year.

Applications should be submitted in accordance with the standard NIH forms, procedures, and schedules. Each application will be reviewed on its scientific merit in competition for available funds.
