REMINDER AND UPDATE: REQUIREMENT FOR PROGRAMS ON THE RESPONSIBLE CONDUCT OF RESEARCH IN NATIONAL RESEARCH SERVICE AWARD INSTITUTIONAL TRAINING PROGRAMS

P.T. 44; K.W. 1014004, 1014006

National Institutes of Health
Alcohol, Drug Abuse, and Mental Health Administration

As stated in the NIH Guide for Grants and Contracts, Vol. 18, No. 45, December 22, 1989, administrative guidelines for the National Research Service Award (NRSA) institutional training grant applications submitted to the National Institutes of Health (NIH) and Alcohol, Drug Abuse, and Mental Health Administration (ADAMHA) have been revised "to require that a program in the principles of scientific integrity be an integral part of the proposed research training effort". This requirement applies to all competing training grant applications received after July 1, 1990. The principal goal of the NRSA grant mechanisms is to train scientists for future careers in biomedical and behavioral research. An important factor in biomedical and behavioral research is the need to maintain the highest levels of integrity in the conduct of research. The research training environment in the university setting provides a powerful context in which to promote responsible research practices.

NIH and ADAMHA recognize that the scientific community is at an early stage of developing information and methods that pertain specifically to training in research ethics for trainees. Not all methods will work in all training situations given the heterogeneity among disciplines and professions. There are no single models or paradigms. Appreciation of the heterogeneity among the biomedical and behavioral research components within the institutions calls for flexibility in approaches to effective education and training models.

Institutions must accept primary responsibility and be allowed to develop their own ways of promoting responsible conduct of research in conjunction with their training programs. Scientific and administrative leaders of the university or from outside (as consultants or speakers) could be a visible part of this effort. Applicants are urged to discuss the development of methods on this important topic with their colleagues and also look to the professional associations for guidance as well as discussions with NIH and ADAMHA staff.

An array of methods might be used at various training levels. It was stated in the NIH Guide for Grants and Contracts, December 22, 1989 notice:

"Most universities and academic institutions have practices and procedures to ensure the responsible conduct of research. These may include informal seminars and presentations on conflict of interest; data recording and retention, professional standards and codes of conduct, responsible authorship, institutional policies and procedures for handling allegations of misconduct, policies regarding the use of human and animal subjects, etc. or formal courses on bioethics, research conduct, the ideals of science, etc."

For the first 18 months of implementation of this requirement, it is expected that institutions will be given considerable flexibility in order to encourage innovation in the development of methods for providing training in scientific integrity. However, descriptions of formal or informal activities related to incorporation of efforts relevant to the responsible conduct of research (i.e., "the plan") should be explicit as possible (e.g., topics to be covered; faculty that may be involved; format; schedule, etc.). No application will be awarded until a description of the institution's plan to provide instruction on ethics in research training is furnished.
ACQUISITION AND CHARACTERIZATION OF ALLOANTISERA AND MOLECULAR PROBES RECOGNIZING PUBLIC SPECIFICITIES OF THE MHC

RFP AVAILABLE: RFP-NIH-NIAID-DAIT-91-22

P.T. 34; K.W. 0710065, 1002008, 1002058, 0760053

National Institute of Allergy and Infectious Diseases

The Division of Allergy and Immunology and Transplantation of the National Institute of Allergy and Infectious Diseases has a requirement for the acquisition and characterization of alloantisera and molecular probes recognizing complex public specificities of the major histocompatibility (MHC). The acquisition will require knowledge of immunogenetics, nucleic acid molecular biological techniques, as well as, acquisition and characterization of alloantisera recognizing the public specificities of the MHC.

One or more contracts may be awarded as a result of this solicitation. It is expected that the contract will have a five-year period of performance. Any responsible offeror may submit a proposal which shall be considered by the Government.

RFP-NIH-NIAID-DAIT-91-22 will be issued on or about August 22, 1990. Proposals will be due forty-five days thereafter.

To receive a copy of this RFP, please supply this office with a request in writing and two self-addressed mailing labels addressed to the office listed below:

Ms. Grace A. Bruce
Contract Specialist
Contract Management Branch, NIAID
National Institute of Allergy and Infectious Diseases
Westwood Building/Room 707
5333 Westbard Avenue
Bethesda, MD 20892

This advertisement does not commit the Government to make an award.

PRECLINICAL PHARMACOLOGY STUDIES OF ANTI-AIDS AGENTS

RFP AVAILABLE: NCI-CM-27701-27

P.T. 34; K.W. 0710100, 0740020, 0715008, 0755010

National Cancer Institute

The Developmental Therapeutics Program (DTP), Division of Cancer Treatment (DCT), National Cancer Institute (NCI), is seeking organizations having the necessary experience, scientific and technical personnel, and facilities to conduct a series of preclinical pharmacokinetic and other pharmacology studies in non-disease bearing animals on compounds having demonstrated ANTI-HIV activity and considered by DCT to merit further development. The studies to be performed will include: The development of methodology for the quantitative measurement of the compound and/or metabolites in animal body fluids and tissues; stability studies of the compound in biological fluids; determination of the plasma concentration-time profile and calculation of relevant pharmacokinetic parameters; determination of the most effective mode of compound administration to achieve and maintain viral inhibitory concentrations in body fluids and tissues; bioavailability studies following administration of an agent by various routes; tissue distribution and urinary excretion studies; and structural determination of metabolites and transformation products of the parent compound. The Government will supply all animals (mice, rats, dogs), test agents, and radiolabeled test agents. Contractors will be expected to provide all equipment, solvents, reagents, and animal facilities needed to conduct this type of work.

It is anticipated that three awards will be made as result of this Request for Proposal (RFP), each for a three year, incrementally-funded level of effort contract beginning on or about October 1, 1991. Only one award will be made to an institution. This project is a recompetition of the work being done under contract numbers: N01-CM-87284 A.D. Little, INC., Massachusetts; N01-CM-87285 Southern Research Institute, Alabama; N01-CM-87286 Vermont Regional Cancer Center, Vermont.
TOXICITY STUDIES IN ANIMALS

RFP AVAILABLE: NIH-ES-90-25
P.T. 34; K.W. 1007009, 0780017

The purpose of this contract is to conduct short-term, in vivo studies that will assist the National Toxicology Program (NTP) in the toxicologic characterization of chemicals. The NTP will provide a chemical-specific protocol outline for each chemical to be studied under this contract. The contracts obtained under this solicitation shall provide the capability to perform specified procedures for assessing the toxicity of approximately 5 chemicals per contract per year for five years. The basic contract award shall provide for the conduct of approximately eight studies per contract per year. The Government may, pending the availability of funds, exercise one option in each year of each contract for the conduct of four additional studies. Study designs will generally involve daily (gavage or skin paint) or continuous (dosed fee or water) dosing periods. The types of chemicals to be studied may include, but shall not be limited to, industrial solvents, plasticizers, food preservatives and colorants, drugs, pesticides, and heavy metals. Most studies will involve rats and mice; however, some studies may include rabbits, guinea pigs, and dogs. This work shall be performed in accordance with the Good Laboratory Practice Regulations established by the FDA for Nonclinical Laboratory Studies (FDA Good Laboratory Practice Regulations for Nonclinical Laboratory Studies; Final Report (Fed. Register, Vol. 52, #172, Friday, September 4, 1987, pp. 33768-33782; 21 CFR Part 58). At least two cost-reimbursement, term form, level of effort, task order type contracts with an estimated period of performance of five years each are contemplated as a result of this solicitation. One award is set-aside for a small business concern. One or more award(s) will be made on an open competition basis. The Government estimates that approximately 1.79 senior professional person years, 1.75 professional person years, and 7.02 technical person years will be required on an annual basis for each basic contract award. An additional .98 senior professional person year, .90 professional person year, and 3.81 technical person years will be required on an annual basis for each contract award for optional studies. All responsible sources may submit a proposal which shall be considered by the Agency. Expected release date of the RFP is August 21, 1990, with proposals due October 30, 1990.

Requests should reference RFP NIH-ES-90-25 and should be forwarded to:

National Institute of Environmental Health Sciences
Contracts and Procurement Management Branch, OM

P.O. Box 12874
Research Triangle Park, NC 27709
SPECIALIZED RESEARCH CENTER PROGRAMS OR CENTER CORE GRANTS TO SUPPORT RESEARCH IN REPRODUCTION

RFA AVAILABLE: HD-91-01

P.T. 04; K.W. 0413002, 0710030

National Institute of Child Health and Human Development

Letter of Intent Receipt Date: January 1, 1991
Application Receipt Date: May 6, 1991

The Reproductive Sciences Branch (RSB), Center for Population Research (CPR), National Institute of Child Health and Human Development (NICHD), supports research on reproduction that relies on a variety of approaches in biomedical sciences. Among the grant mechanisms used to provide research support, the RSB uses:

1) Specialized Research Centers (P50s) which are integrated groups of research projects and supporting core service facilities. The research activities included in such project grants must comprise, by definition, a multidisciplinary approach to biomedical problems in reproduction. Although these research programs may have more than one theme, focus, or emphasis, all of the projects must be responsive to one or more of the specific areas of reproductive research which constitute the purview of the RSB, CPR, NICHD.

2) Center Core Grants (P30s) that support Center Core facilities designed to enhance existing federally supported research projects within the purview of the RSB, CPR, NICHD. Such Center awards require a critical mass of individual, reproductive-oriented awards whose productivity and quality would be increased by support from central technical facilities.

At present, the RSB supports a fixed number of centers with a commitment of five years of support that is competitively renewable for additional five-year periods. Support for one P50 Center and three P30 Centers ends in FY 1992, and it is anticipated that these Centers will submit renewal applications. While there are no new Center positions available at this time, new groups of investigators, in addition to the current awardees, are invited to compete for the existing four (4) positions.

Potential applicants should contact the RSB staff for further information regarding reproductive sciences center grants (P50s and P30s). It is strongly recommended, but not mandatory, that potential applicants send a letter of intent to the RSB staff at the address listed below by January 1, 1991. This letter should outline the organizational structure of the proposed center, list the title of the relevant research projects to be associated with it, and the names of the relevant principal investigators. The letter of intent should be received by the RSB no later than January 1, 1991, but applicants are encouraged to send it as soon as they decide to apply for the grant so that the RSB staff can be of maximum assistance in the application process.

Although this solicitation is included in the plans for FY 1992, support for these center grants is contingent upon the receipt of funds for these purposes by the NICHD. The number of grants to be awarded is also contingent upon a sufficient number of applications receiving a high enough level of merit to be considered for an award. It is expected that up to four (4) awards will be made as a result of this announcement.

Applications for grants involving clinical studies should include members of minority groups and women in the study populations. Otherwise, a clear rationale for their exclusion must be provided in the application.

For further information and a copy of the fully described RFA, please contact:

Julia Lobotsky, M.S.
Reproductive Sciences Branch
Center for Population Research
National Institute of Child Health and Human Development

Telephone: (301) 496-1696

This program is described in the Catalog of Federal Domestic Assistance No. 13.864, Population Research. Awards will be made under the authority of the Public Health Service Act 301 (42 USC 241) and 441 (USC 289d) and administered under PHS Grant Policies and Federal Regulations 42 CFR Part 52 and 45 CFR Part 74. This program is not subject to A-95 or Health Systems Agency review.

CHILD AND ADOLESCENT TRIAL FOR CARDIOVASCULAR HEALTH: COORDINATING CENTER
RFA AVAILABLE: HL-90-13-P
P.T. 34; K.W. 0715040, 0745035, 0755015, 0755018, 0403001
National Heart, Lung, and Blood Institute
Application Receipt Date: November 13, 1990

The Division of Epidemiology and Clinical Applications (DECA), National Heart, Lung, and Blood Institute (NHLBI), announces the availability of a Request for Applications (RFA) on the above subject. Copies of the RFA are available from staff of the NHLBI. Competition will be limited to domestic institutions.

This award will support a coordinating center to participate with field centers and the NHLBI in a collaborative study entitled "Child and Adolescent Trial for Cardiovascular Health" (CATCH). The overall objective of the trial is to assess the effects of a school-based intervention for promoting healthful behavior in elementary school children to reduce their subsequent cardiovascular disease risk. CATCH is currently in the last year of a 3.5 year feasibility study that involves protocol writing and developmental work and testing in elementary schools at four Field Centers across the country. The assistance mechanism used to support the current feasibility study and the proposed main trial for the CATCH Study is the cooperative agreement which is similar to the traditional NIH research grant. The administrative and funding mechanism for this trial will continue to be a cooperative agreement. It differs from a research grant principally in the extent and nature of NHLBI staff involvement.

Requests for copies of the RFA may be addressed to:

Elaine J. Stone, Ph.D.
Prevention and Demonstration Research Branch
Division of Epidemiology and Clinical Applications
National Heart, Lung, and Blood Institute
Federal Building, Room 604A
Bethesda, MD 20892
Telephone: (301) 496-3503
FAX: (301) 402-0517

NATIONAL RESEARCH SERVICE AWARD-INSTITUTIONAL GRANTS
RFA AVAILABLE: HS-90-01
P.T. 44; K.W. 0720005, 0730050
Agency for Health Care Policy and Research
Application Receipt Date: October 15, 1990

AUTHORITY AND PURPOSE

Under authority of Section 487 of the Public Health Service (PHS) Act as amended (42 USC 288), the Agency for Health Care Policy and Research (AHCPR) is awarding National Research Service Award (NRSA) institutional grants (T32) to eligible institutions to develop or enhance research training opportunities for qualified individuals of the institution's selection who seek to prepare for careers in health services research. This Request for Applications (RFA)

announces the application receipt date for this program (October 1, 1990) and identifies the training areas of special interest.

The purpose of the NRSA program is to help ensure that highly trained scientific personnel will be available in adequate numbers and in the appropriate research areas and fields to maintain the nation's health services research agenda. Title 42 of the Code of Federal Regulations, Part 66, is applicable to this program as is the following Catalog of Federal Domestic Assistance number: 13.226.

APPLICANT ELIGIBILITY REQUIREMENTS

Domestic nonprofit private or public institutions may apply for grants to support research training programs. The applicant institution must have the staff and facilities required for the proposed program. The training program director at the institution will be responsible for the selection and appointment of trainees and for the overall direction of the program.

REVIEW SCHEDULE

The schedule (indicated below) is designed to allow Program Directors time to recruit candidates during the fall/winter of the academic year (1991) for appointments to begin the following summer.

| Application Receipt Date | Initial Review Meeting | Council Meeting | Earliest Award
|--------------------------|------------------------|-----------------|-----------------|

ADDITIONAL INFORMATION

The AHCPR supports training in all areas of health services research. The AHCPR expects to fund approximately five new and/or renewal institutional training awards in response to this RFA.

Complete details on the policy and guidelines, the mechanism of the award, application procedure, review criteria, and copies of the RFA may be obtained from:

Mr. Hoke S. Glover
Parklawn Building, Room 18-12
5600 Fishers Lane
Rockville, MD 20857
Telephone: (301) 443-3091

ONGOING PROGRAM ANNOUNCEMENTS

MULTIPURPOSE ARTHRITIS AND MUSCULOSKELETAL DISEASES CENTERS

PA: PA-90-24

P.T. 04; K.W. 0715010, 0715136, 0785055, 0710030, 0730050

National Institute of Arthritis and Musculoskeletal and Skin Diseases

The National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS) uses a variety of award mechanisms to accomplish its research mission. Among these mechanisms is the P60 award for a multipurpose arthritis and musculoskeletal diseases center.

The application guidelines for the multipurpose arthritis and musculoskeletal diseases centers have been revised and are in effect for all applications received on or after June 1, 1990.

Fourteen centers are currently funded by NIAMS. Organizations not currently funded are encouraged to consider applying for this program. Eligible organizational entities are major medical complexes in the United States with a base of meritorious biomedical research related to arthritis and musculoskeletal diseases. Institutional programs in education, epidemiology, and/or health services that can be related to arthritis and musculoskeletal diseases should also be present. The center fosters a multidisciplinary research approach to the manifold problems of arthritis and musculoskeletal diseases. The center grant is not intended to provide total funding for all of these activities, but to provide funds for development of new capabilities for research and related activities.
A multipurpose arthritis and musculoskeletal diseases center has two major research coordinating components: biomedical research and research in education, epidemiology, and health services. An administrative unit provides oversight. The interactions afforded by the administrative unit and two research components provide opportunities to promote new research directions through developmental and feasibility projects and through core units. In addition, research projects in education, epidemiology, and/or health services are supported. The NIH urges applicants for grants to give added attention (where feasible and appropriate) to the inclusion of minority groups and women in the study populations for research.

APPLICATION AND REVIEW PROCEDURES

Applications in response to this announcement will be reviewed in accordance with standard NIH peer review procedures for research center grants. Review criteria include significance and originality of the research goals and approaches; feasibility of the research and adequacy of the experimental design; training, research competence, and dedication of the investigators; adequacy of available facilities; and provision for the humane care of animals and appropriate use of human subjects. Funding decisions will be based on peer review group and National Advisory Council recommendations. Applications should be submitted on form PHS-398 (rev. 10/88), available in the business or grants office at most academic research institutions, or from the NIH Division of Research Grants. Applications will be accepted in accordance with the submission dates for new and competing center grant applications on a continuing basis:

February 1, June 1, October 1

The phrase "RESPONSE TO NIAMS PROGRAM ANNOUNCEMENT: MULTIPURPOSE ARTHRITIS AND MUSCULOSKELETAL DISEASES CENTER, PA-90-24" should be typed on line 2 of the face page of the application. The original and six copies should be sent or delivered to:

Grant Application Receipt Office
Division of Research Grants
Westwood Building, Room 240
National Institutes of Health
Bethesda, MD 20892-4500

Because of the limitations and the special nature of the program, potential applicants are strongly encouraged to contact NIAMS staff to discuss the scope, content, size, and timing of any applications for this program. Initial inquiries and requests for the revised guidelines and additional information should be directed to:

Julia B. Freeman, Ph.D.
Centers Program Director
National Institute of Arthritis and Musculoskeletal and Skin Diseases
Westwood Building, Room 403
Bethesda, MD 20892
Telephone: (301) 496-7495

This program is described in the Catalog of Federal Domestic Assistance No. 13.846, Arthritis, Musculoskeletal and Skin Diseases Research. Awards will be made under the authority of the Public Health Service Act, administered under PHS grant policies and Federal Regulations 42 CFR Part 52 and 45 CFR Part 74. This program is not subject to the intergovernmental review requirements of Executive Order 12372 or Health Systems Agency.

STUDIES OF STRUCTURAL BIOLOGY AND PROTEIN STRUCTURE-FUNCTION RELEVANT TO DIABETES, ENDOCRINOLOGY, AND GENETIC METABOLIC DISEASES

PA: PA-90-25
P.T. 34; K.W. 0790000, 0760060, 0760070, 1002004, 1002008, 1002019, 0710070
National Institute of Diabetes and Digestive and Kidney Diseases

PURPOSE

This announcement is intended to encourage the submission of applications proposing research relevant to understanding the relationships between structure and function of peptides and/or proteins and the role they play in normal and disease-related processes. Such understanding should also lead to the design, synthesis, or engineering of new, biologically active
peptides/proteins with therapeutic potential in diabetes, endocrine disorders, and genetic metabolic diseases.

DISCIPLINES AND EXPERTISE

Interdisciplinary approaches may be needed for the proposed studies. Expertise required could span the following research areas: biophysics, computer-based structural analysis, biochemistry, cell and molecular biology, immunology, genetics, and genetic or protein engineering. Integration of basic research approaches and development of techniques is encouraged.

BACKGROUND

The Division of Diabetes, Endocrinology and Metabolic Diseases (DDEM) supports basic and clinical research and research training related to diabetes mellitus and its complications, to endocrinology and a variety of endocrine diseases, and to metabolism and various genetic metabolic diseases. Studies on structural biology, especially peptide/protein structure-function, are of significant relevance to the DDEM. Recent notable advances in this area include: development of area detectors that facilitate macromolecular X-ray crystal diffraction data collection and analysis; availability of neutron scattering facilities and other new biophysical approaches to macromolecular structural analysis; development of new approaches to computerized representation, manipulation, and analysis of three-dimensional structures; and development of novel gene manipulation techniques including site-directed mutagenesis. These techniques allow the initiation of a broad variety of new studies relevant to understanding peptide/protein structure-function.

OBJECTIVE AND SCOPE

The research project grant (R01) and FIRST grant (R29) applications submitted in response to this announcement could propose studies on:

- Development of manual, semiautomated, and automated techniques for the purification and crystallization of soluble, membrane-associated, or integral membrane peptides and/or proteins.
- Analysis of crystallized peptide or protein structures by X-ray and neutron diffraction, image reconstruction, and other state-of-the-art technologies.
- Development of new approaches for the prediction of three-dimensional structures of peptides and proteins in solution, lipid-bilayers, and membranes, including the prediction of surface probability profiles and protein backbone structures.
- Development of new software algorithms and improvement of existing methods that will accelerate progress in the field of macromolecular simulations in structural biology.
- Enhancement of transcriptional and translational efficiency for over-expression of proteins from genes of interest, both endogenous and foreign, in eukaryotic or model prokaryotic systems.
- Elucidation of mechanisms for peptide/protein insertion and/or translocation across membranes.
- Design, synthesis, and engineering of new pharmacologically-active peptides and/or proteins.
- Structure-activity studies of peptides and/or proteins that integrate several of the above approaches.

The research areas exemplified above are not intended to be all inclusive. There are, however, some specific limitations to the scope of this announcement. Thus:

1. Peptides and/or proteins selected for study should be of mammalian or other vertebrate origin. Peptides and/or proteins of prokaryotic origin, or of lower eukaryotic origin such as drosophila or yeast, should be proposed only as models for mammalian systems when information on the latter is not available. Studies proposed in these model systems should facilitate understanding of peptide/protein structure-function in mammalian systems.
2. The peptides or proteins to be studied should have specific relevance to one of the following programmatic areas: carbohydrate metabolism and its hormonal control; diabetes mellitus; peptide hormones, hormone receptors, and signal transmission; endocrine disorders; normal and abnormal processes of lipid, protein, amino acid, urea, purine, pyrimidine, metal ion, and steroid metabolism; genetic metabolic disorders, e.g., lysosomal storage diseases, diseases of peroxisomal metabolism, diseases of transport, diseases of amino and other organic acid metabolism, diseases of carbohydrate metabolism (other than diabetes mellitus), diseases of purine and pyrimidine metabolism, etc.

MECHANISM OF SUPPORT

The mechanism of support for this program will be the regular research project and FIRST grants (R01 and R29). The regulations (Code of Federal Regulation, Title 42, Part 52 and, as applicable to the state and local governments, Title 45, Part 74) and policies which govern the research grants programs of the National Institutes of Health will prevail. Since a variety of approaches would represent valid responses to this solicitation, it is anticipated that there will be a range of costs among individual grants awarded. With respect to post award administration, the current policies and requirements that govern the regular research grant programs of the NIH will prevail.

REVIEW PROCEDURES AND CRITERIA

Assignment of Application

Applications will be received by the NIH, Division of Research Grants (DRG), referred to an appropriate Initial Review Group (IRG) for scientific merit review, and the usual DRG referral guidelines will be followed in assignment of applications. Referral decisions will be governed by normal programmatic considerations as specified in the Referral Guidelines of the NIH, DRG. Some applications may receive a dual assignment.

Review Procedures

Applications submitted in response to this solicitation will be reviewed on a nationwide basis in accord with the usual NIH peer review procedures. Applications will first be reviewed for scientific and technical merit by an IRG composed primarily of non-federal scientific consultants, and then by the National Advisory Council of the appropriate Institute(s). The review criteria customarily employed by the NIH will prevail.

Review Criteria

The factors to be considered in the evaluation of the scientific merit of each application will be those used in the review of traditional research project grant applications, including the novelty, originality, and feasibility of the approach; the training experience and research competence of the investigator(s); the adequacy of the experimental design; and the suitability of the facilities. The appropriateness of the requested budget to the work proposed will also be assessed.

METHOD OF APPLYING:

Format for Application

Applications should be submitted on form PHS 398 (rev. 10/88), which is available from the applicant institution's Office of Sponsored Research or from the NIH Division of Research Grants. Use the conventional format for research project grant applications and ensure that the points identified in the Program Announcement (PA), in the section on "Review Procedures and Criteria", are fulfilled. To identify the application as a response to this PA, check "Yes" on item two of page one of the application and enter the title "NIDDK: Structural Biology in DEMD, PA-90-25."

Deadline

Applications will be accepted in accordance with the announced receipt dates for new applications (see receipt dates and review schedule in application kits). This is an open-ended program which intends to provide interested applicants the maximum flexibility they need to develop appropriate research applications.
Application Procedure

The original and six copies of the application should be sent or delivered to:

Application Receipt
Division of Research Grants
National Institutes of Health
Westwood Building, Room 240
Bethesda, MD 20892

Inquiries

Before submitting an application, and for further information, investigators are strongly encouraged to contact the appropriate program staff listed below:

For the Endocrinology, Metabolic Diseases, and Cystic Fibrosis Research Programs:

Robert Katz, Ph.D.
Deputy Chief, Endocrinology and Metabolic Diseases Research Programs Branch,
DDEM, NIDDK, NIH
Westwood Building, Room 607
Bethesda, MD 20892
Telephone: (301) 496-7997

For the Diabetes Research Programs:

Joan T. Harmon, Ph.D.
Executive Director, Diabetes Research Program
DDEM, NIDDK, NIH
Westwood Building, Room 622
Bethesda, MD 20892
Telephone: (301) 496-7731

This program is described in the Catalog of Federal Domestic Assistance, No. 13.847, Diabetes, Endocrinology, and Metabolic Diseases. Awards will be made under the authority of the Public Health Service Act, Title III, Section 301, (Public Law 78-410, as amended; 42 USC 241) and administered under PHS grant policies and Federal Regulations, most specifically at 42 CFR and CFR Part 74. This program is not subject to the intergovernmental review requirements of Executive Order 12372 or Health Systems Agency review.

**THE MAILING ADDRESS GIVEN FOR SENDING APPLICATIONS TO THE DIVISION OF RESEARCH GRANTS OR CONTACTING PROGRAM STAFF IN THE WESTWOOD BUILDING IS THE CENTRAL MAILING ADDRESS FOR THE NATIONAL INSTITUTES OF HEALTH. APPLICANTS WHO USE EXPRESS MAIL OR A COURIER SERVICE ARE ADVISED TO FOLLOW THE CARRIER'S REQUIREMENTS FOR SHOWING A STREET ADDRESS. THE ADDRESS FOR THE WESTWOOD BUILDING IS:

5333 Westbard Avenue
Bethesda, Maryland 20816

NIH GUIDE - Vol. 19, No. 30, August 17, 1990 - Page 10
