

Office of Science Policy,

I cannot imagine how difficult it must be for you to see first hand the pain and suffering - both physical and emotional, that you cause in your research but I understand you feel that you need to do it for the humans that need the medical advancement.

The sad thing is, because we as humans are such complex and specific biological creatures, the failure rate of such research translates from animals to humans makes this research not just unethical and

inhumane but dangerous

sin a taxpayer and I  
do not want my tax  
dollars spent this way.

Thank you,

Meg Pasquini
