Dear HIH

Regarding the human-animal chimeras research

Stories in myths, fiction, and fantasies discuss mankind playing god with grossly disfigured results of mind, body, and soul. Hence, I submit and agree with the following. So, do NOT use my tax dollars and violate my faith values in this land of the free and the home of the brave.  
Paul Wadowick

I object strongly to the NIH's proposal to rescind its moratorium on funding of research involving human-animal chimeras. I do not want my tax dollars being used for grossly unethical research involving the creation and manipulation of part-human, part-animal beings whose very existence blurs the line between humans and non-human animals. This proposed research raises all the ethical problems of human embryonic stem cell research in general and serious additional problems related to the creation of human-animal beings with partly or substantially human brains and/or human gametes.

I also object strongly to the NIH's apparent lack of consideration for the ethical issues implicated by this research. Indeed, the NIH pledged to "undertake a deliberative process to evaluate the state of the science in this area, the ethical issues that should be considered, and the relevant animal welfare concerns associated with these types of studies" when the moratorium was put in place in 2015. Yet, to date there is no evidence of any discussion of the ethical issues involved in creating partly human animals. Next, you will be inserting animal qualities into human cells.

I strongly urge you to maintain the current moratorium on funding research involving the creation and manipulation of human-animal chimeras.

Paul Wadowick
