BY: NIH/OSP

To whom It May Concern:

I am writing to say I am against federally funded research using human embryonic stem cells with animals. I understand there has been no public debate to determine how we as a nation want to address this <sup>Moral</sup> issue. I feel that this is an issue the public should decide, <sup>about</sup> not a small group. It is a moral issue and demands a moral consideration from all of us.

As the public debates this issue goals for any research needs to be stated. Do we bill the end result to supply medical parts, are we trying to grow human/animal beings to use as a work force for humans, or are <sup>there</sup> other reasons for this research?

The public needs to be well informed that any useful success would require young ladies to give their eggs to supply the need. I believe this would be one more

Area for a chance to exploit our young  
women & or the women of the world.

Sincerely,

Phyllis J. Dixon
